Figure 1: Western blot analysis of PtX™ Rabbit Anti-IFN- γ . Lanes 2 – 6: Varying amounts of antigen (IFN- γ) were run on the SDS-PAGE. Separated bands were transferred to the membrane and PtX™ Rabbit Anti-IFN- γ (1:2 000) was used to detect the antigen. The two bands of IFN- γ were visualized following the addition of anti-rabbit secondary antibody with HRP and substrate. Our antibody was able to detect antigen amounts upwards of 30ng (Lane 6).
